

Vantage VUE™

Quick Setup Guide

Please refer to your manuals for detailed instructions.

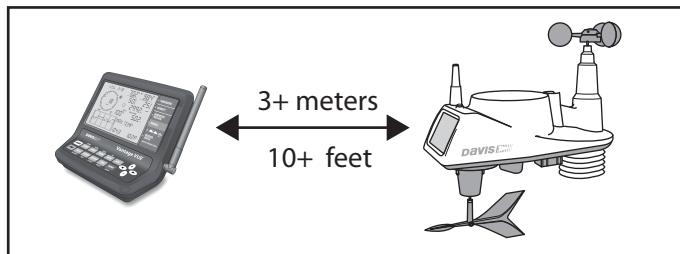

1. Prepare the Integrated Sensor Suite (ISS): attach wind cups and wind vane; install debris screen, rain collector tipping spoon assembly, and battery. (*Pages 3-4, ISS Installation Manual*)

2. Install, power and set up console. (*Pages 2-15, Console Installation Manual*)

3. Verify data from ISS to the console. (*Page 6, ISS Installation Manual*)

Note: For best reception during this step, console and ISS should be at least 10 feet (3 meters) apart. (Initial reception typically takes 1-3 minutes but can take up to 10 minutes depending on specific environmental conditions.)

4. Install the ISS. (*Pages 7-10, ISS Installation Manual*)
